

Use of the Multi-Vaccine VIS (Vaccine Information Statement)

YOUR BABY'S FIRST VACCINES WHAT YOU NEED TO KNOW

Babies get six vaccines
between birth and
6 months of age.

These vaccines
protect your baby
from 8 serious diseases
(see the next page).

Your baby will get vaccines today that prevent
these diseases:

- ☐ Hepatitis B ☐ Polio ☐ Pneumococcal Disease
☐ Diphtheria, Tetanus & Pertussis ☐ Rotavirus ☐ Hib

(Provider: Check appropriate boxes)

The new multi-vaccine VIS is specifically intended for use
when vaccines are given between birth and 6 months of age.
It may be used through age 6 years.

This VIS can be used when giving a combination vaccine in
which all vaccine components are listed on the VIS such as:
Pediarix (DTaP-HepB-IPV) or Comvax (HepB-Hib)

Make sure the MCIR language is on any VIS you use. Get these
from your local health department or www.michigan.gov/immunize

Give out all **4 pages** of the multi-vaccine VIS
Current date on this VIS is 01/30/08

Check the appropriate boxes indicating which vaccines you will
be giving at this visit

Do not use when vaccinating older children, adolescents or adults
(risk factors for these ages are not included)

How to Chart the Multi-Vaccine VIS

The 1-10-08 entries show how to document single and combination vaccines using separate VISs (4 different VIS dates are recorded)

The 2-14-08 entries show how to document single and combination vaccines using the multi-vaccine VIS (same VIS date is recorded)

Vaccine Administration Record for Children and Teens*

Vaccine	Date Vaccine & Vaccine Information Statement Given	Type of Vaccine	Date on Vaccine Information Statement (VIS)	Vaccine Manf.	Vaccine Lot Number	Site Given	Route	Signature of Vaccine Administrator	Client VFC Status
Diphtheria, Tetanus, Pertussis Types are: DTaP DT DTaP-Hib DTaP-HepB-IPV Tdap Td	1-10-08	DTaP/HepB/IPV	5-17-07	GSK	AC21B066AA	LL	IM	A Smith, RN	M
	2-14-08	DTaP/HepB/IPV	1-30-08	GSK	AC218047AA	RL	IM	A Smith, RN	M
